Experience

IT / Purchasing Intern — California Clothing Inc., Purchasing Department

May 2026 – August 2026 :

- Built a Node.js/Express internal tool suite for the Purchasing Department, including a AI Vision-powered PO scanner, canvass sheet extraction workflow, and a live dashboard replacing manual Excel-based reporting.
- Wrote a Python data-cleaning pipeline for monitoring spreadsheets (merged-cell handling, phantom-row detection), cutting a 30-minute manual process down to under 30 seconds.
- Designed a supplier database and contact tool used by staff for day-to-day vendor outreach across 300+ suppliers.

Projects

- **SEALGUARD – Secure Document Authentication System (Capstone)**
Building a Django system for barangay procurement contract authentication using SHA-256 fingerprinting, AES-256 encryption, RSA key wrapping, and LSB steganography for tamper-evident digital seals.
Implemented role-based access control, document versioning, public verification, and audit logging; extended tamper detection to PDF vector content alongside text, images, metadata, and structure.
- **Purchasing Tool – Internal Procurement Dashboard**
Built a full-stack Node.js/Express application for PO tracking, canvass sheet automation (AI API extraction), and supplier management, replacing manual Excel workflows for the Purchasing team.
- **Attendance Checker – Hours Tracking Web App**
Built a Next.js/TypeScript app with an editable calendar and log view for tracking daily time-in/out against a required-hours target, simply used to check my current hours and remaining time left on the internship, featuring live hour calculations and animated month navigation.
- **Talipaap – Mobile Market App**
Created a Firebase-powered Android app for local market shopping with real-time data and improved user experience.
- **SenseGrid – IoT Room Monitoring System**
Developed an IoT system using Arduino and WeMos to monitor temperature, humidity, and lighting with Firebase integration.

Skills

- | | |
|--|---------------------------------------|
| • C#, ASP.NET Web Forms | • Arduino, IoT Development |
| • JavaScript (Node.js, Express, Next.js) | • Microsoft Azure, Firebase |
| • Python, Django | • SQL & Realtime Databases |
| • Xamarin, Android Studio | • Cybersecurity (Encryption, Hashing) |

Certifications

- | | |
|--|--|
| • CCNA: Introduction to Networks (2024) | • CompTIA Tech+ |
| • CCNA: Switching, Routing, and Wireless Essentials (2024) | • Google Cloud Computing Foundations |
| • CCNA: Ethical Hacker (2025) | • Google Cloud Cybersecurity Certificate |

Seminars & Workshops

- **Serverlesspresso Workshop (AWS Student Community Day – Southfest)** – Serverless architecture & cloud deployment (Feb 2026)
- **Atlassian Lunch & Learn: Rovo AI** – AI-powered collaboration & workflow automation (Feb 2026)
